Seeing beyond

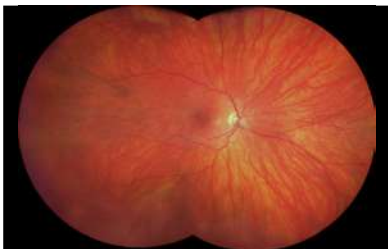

\*Offer valid through November 30, 2025 only in the U.S. Cannot be combined with other promotional offers.

# Take Advantage of the Screening Program.

Up to \$39 for qualifying patients

ZEISS CLARUS

## Tired of obstructive lids and lashes?

ZEISS CLARUS uses partial confocal optics that reduce lid, lash, and other artifacts from the anterior segment.

## Ready for True Color?

ZEISS CLARUS uses True Color generated through sequential illumination by broad-spectrum red, green and blue LEDs, giving a natural looking fundus as it appears through direct observation.

Other device

## Want to image smaller pathology?

ZEISS CLARUS captures clear and accurate images from the macula to the far periphery with  $7.3 \mu\text{m}$  optical resolution, and non-mydratric capture down to 2.5 mm.
